How does it work?

HCG is a naturally produced hormone like substance in pregnant women that feeds their growing baby by consuming existing stored fat. Researchers have found that by injecting a small amount of HCG, it can actually help the body burn more fat and can be used to aid in weight loss when combined with a healthy low calorie diet.

Will it make me feel pregnant?

No. the amount of HCG injected is very small (.125-.200 IU) and it is a hormone-like substance created during pregnancy, *not a pregnancy hormone*. By the way—both female and male can take HCG.

Is it safe?

Yes. Dr. Albert Simeons, a British physician, has been successfully treating patients in Europe for over 50 years. This is not a new protocol; it has been tested for decades. Our clinic and our doctor is now following this protocol here in the U.S.

Is it approved by the FDA?

HCG is available as a prescription medicine which is FDA approved for certain uses, but is not FDA approved for the treatment of weight control or obesity. Using HCG in dieting is considered an "off-label" use. Medications are frequently used "off-label" to treat conditions that are unrelated to their original indications, safely and effectively.

Are there any side effects?

Several positive side effects are associated with HCG therapy. These include: no loss of muscle mass, normalize the thyroid gland, rebuilds the adrenal glands, balances the hormone out-put, replaces where fat belongs throughout the body, normalizes cholesterol levels, corrects high blood pressure and blood sugar imbalances in diabetics to where most are able to get off and stay off of their medications, normalizes appetite demands, increased energy without nervousness or feeling "jittery", clearer thought processes, improved sleep at night, feeling less irritable and tightness skin as you lose the fat.

Is it Permanent?

Yes. Patients that follow the protocol in a disciplined fashion and eat sensibly thereafter have experienced permanent body transformations.

How long will it take?

The program consists of Four Phases:

Phase One: Detoxification (0-30 days, depending on the individual situation)

Phase Two: Shots and Diet (23 or 42 day regimen, depending the desired weight loss)

Phase Three: Reset Body Metabolism (3 weeks)

Phase Four: Maintenance (for life)

Please call for an appointment. In order for you to be in our weight loss program you must have a prescription from our doctor for HCG.
